Abstract

This is the abstract text. Give the question, why it is important, your strategy, and your headline conclusions. All up front. For a thesis the abstract can be slightly longer. Abstracts can, but typically do not, include citations.

Keywords: Keywords, Keywords, Keywords, Keywords, Keywords

Table of contents

List of Figures

List of Tables

1 Introduction

- The question
- Why it is important
- How you answer it
- What you find
- How the thesis is structured

Some people use commenting in the text to ensure that each paragraph has a purpose

Why is it that…

To address this question I …

Note: Introductions conventionally do not have subsections, or figures, or tables.

2 Theory

Describe literature that sheds light on why your project is important, clarifying what is known or not

2.1 Cross Referencing

- To reference a figure with example label "plot", use e.g. `@fig-plot`. Figure 1
- Analogously, to reference a table with example label "data", use e.g. `@tbl-data`. Table 1.
- To reference a section, such as the Introduction (Section 1), use e.g. `@sec-intro`.
- To reference an equation, same (Equation 1), use e.g. `@eq-euclid`.

For complete information on cross referencing with Quarto, see https://quarto.org/docs/authoring/cross-references.html.

2.2 Citations

`.bib` information is sitting in `assets/bib.bib`

- For a citation in parentheses use `[@putnam2000bowling]` and for a text citation: `@putnam2000bowling`.
- These render as (Putnam 2000) and Putnam (2000)

Multiple citations can be given as `[@putnam2000bowling;@blair2023research]`, producing (Blair, Coppock, and Humphreys 2023; Putnam 2000)

3 Design

3.1 Case

Why you are working on the cases you are working on

Table 1: This is my table

	this one	that one
(Intercept)	0.04	0.04
	(0.09)	(0.09)
X	1.01***	1.01***
	(0.08)	(0.08)
W		−0.01
		(0.07)
R^2	0.52	0.52
Adj. R^2	0.52	0.51
Num. obs.	100	100
RMSE	0.85	0.85

***$p < 0.001$; **$p < 0.01$; *$p < 0.05$

3.2 Data sources

where did you get the data?

3.3 Data patterns

show the data!

3.4 Analysis strategy

What strategies you will use

You can use LaTeXnatively. See Equation 1.

$$f(x) = -\frac{1}{2}(1 - x)^2 \tag{1}$$

4 Main results

5 A deeper dive

Chapter could be:

1. second analysis
2. case studies
3. alternative interpretations
4. mechanisms
5. heterogeneity
6. robustness

5.1 A sample figure

Here is figure. See Figure 1.

## 5.2 A table

See Table 1.

Figure 1: A sample figure: Information about this figure

6 Discussion

7 Conclusion

- Recap of what was learned
- Caveats
- Implications: for policy, for research
- (Perhaps: Next steps)

Note: Conclusions conventionally do not have subsections, or figures, or tables.
